

Creating the Future

Soap Boat

Cut a small piece of cardboard into a boat shape, with a V cut into the stern.

Place the boat onto the surface of a large pan of water.

Carefully place a few drops of dishwashing liquid on the water in the "V" shape of the boat.

Watch your boat move forward!

Engineers explore and experiment to find new ways to make things go. Do you think soap could be used as a fuel for ocean liners?
