

This research was generously supported by...

Our Purpose

- In the early 2000s two projects, Changing the Conversation (CTC) and Engineer Your Life (EYL), looked at how the engineering community was portraying itself, how the public and college-bound girls perceived engineering, and how it aligned with their professional priorities.
- This work resulted in an "a-ha moment" where it became clear that how we were talking about ourselves (engineers solve problems using math and science) neither illustrated the critical work being done by engineers nor aligned with career or personal aspirations for students, their parents, or teachers.
- This research led to a wholesale change in the way the engineering community presented itself with newly tested messages and tag lines that emphasized the creativity of the field, the teamwork aspect, and how engineering shapes our world.
- Fast forward to 2022. Today's teens are being shaped by different world events as well as being the first generation to grow up while being constantly online and plugged in. With this as the backdrop, we are curious to learn how the messages and themes identified in the EYL and CTC initiatives are holding up. Are they still relevant and meaningful? What is important to today's students? How do today's teens view engineering and a potential career in STEM? What resonates and motivates them to consider engineering?

Research Goals

- Gauge students' and parents' level of understanding and interest in engineering
- Assess general career motivators and values
- Evaluate current messages
- Explore new messaging and opportunities
- Identify differing attitudes and messaging opportunities by race, gender, and self-identified disabilities.

Methodology

2 Students
Survey
Round 2

3 Parents Survey

Global Strategy Group conducted an online survey of **2,000 students**, between May 3 – 17, 2022, from a national panel of students.

The margin of error at the 95% confidence level is +/- 2.2%. The margin of error on subsamples is greater.

Global Strategy Group conducted an online survey of **2,047 students**, between October 6 - 13, 2022, from a national panel of students.

The margin of error at the 95% confidence level is +/- 2.2%. The margin of error on sub-samples is greater.

Global Strategy Group conducted an online survey of **1,000 parents**, between October 5 - 13, 2022, from a national panel of parents.

The margin of error at the 95% confidence level is +/- 3.1%. The margin of error on sub-samples is greater.

Engineering has a 'concrete' image and a gender divide on interest

- Students think engineering is hard and requires skills they may not have
 - Students' top three descriptors:
 - Good at math and science
 - Smart
 - Builds, constructs, and makes things
 - Students identify math as their #1 reason for not pursuing engineering
- To start, 18% of all students are very interested in a career in engineering

% of students very interested in a career in engineering

A II			Male			Female			Attend	Attend Private/	Identify
All Students	Male	Female	White	Black	Hispanic	White	Black	Hispanic	Public School	Charter School	with a disability
18%	24%	11%	25%	23%	23%	12%	11%	9%	17%	26%	20%

Parents can be allies in promoting careers in engineering

Students trust parents more than anyone for career advice

- Moms are the most trusted and consulted career counselors.
- Dads are second
- Close friends and adults that "work in a field I would consider" are the third most trusted career influencers

Engineering meets students' financial concerns and career aspirations

- Financial security, interesting work, and making a difference are top career motivators
- Both parents and students would pitch a career in engineering to others by focusing on the ability of engineers to help others and "change the world."

Not all paths to a career in engineering require a degree. This is news.

- Over half of students and parents initially believe that a Bachelor's degree is necessary for a career in the field of engineering
- The message that "engineering is a career that is open to everyone. You don't need to graduate from a four-year university to have a successful career in engineering," appeals to both parents and students.

Student interest in engineering grows with exposure to profiles of engineers and key messages

The "Base" – already very interested in pursuing engineering

- 13% of overall student population
- The "Base" looks like the current engineering student population, more likely to be:
 - White
 - Male
 - Attend private/charter school
 - Plan on attending 4-year college

The "Movers" – may be persuaded to consider engineering

- 34% of overall student population
- "Movers" looks like the target groups needed to diversify the engineering field, more likely to be:
 - Students of color
 - Female
 - Plan to attend a community college or are undecided on plans

Show students what a career in engineering looks like by showing them engineers who look like them

- Profiles of engineers and people who work in engineering can drive student interest in careers
 - When students can see themselves in the images and profiles of engineers who look like people they may aspire to be, they're more receptive to the idea of pursuing a career in engineering...
 - ...that means that female students respond more positively to profiles of female engineers, and Black girls and boys respond more positively to profiles of Black engineers.
 - Bios of video game developers and NASA engineers were appealing and boosted interest in engineering among students.

Strengthen all communication with effective messaging

- Engineering is a "well-paid and prestigious field" that "sets students up for success"
 - Is both appealing and believable and speaks to concerns that both parents and students have about finances.
- Engineers can make "a world of difference"
 - A top testing message from Changing the Conversation, the updated message is still an appealing and believable message for both parents and students.
- Engineering is a career that is "open to everyone"
 - While highly appealing across all demographic groups, but not everyone believes that it is true.

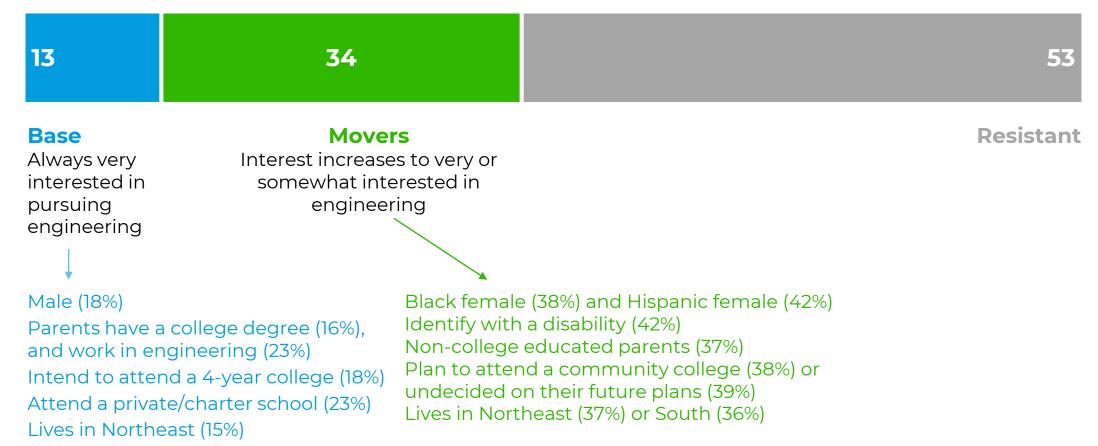

The Base & The Movers

Students: Interest in Engineering

Student Interest Targets

Parents: Approval of Engineering

Parent Approval Targets

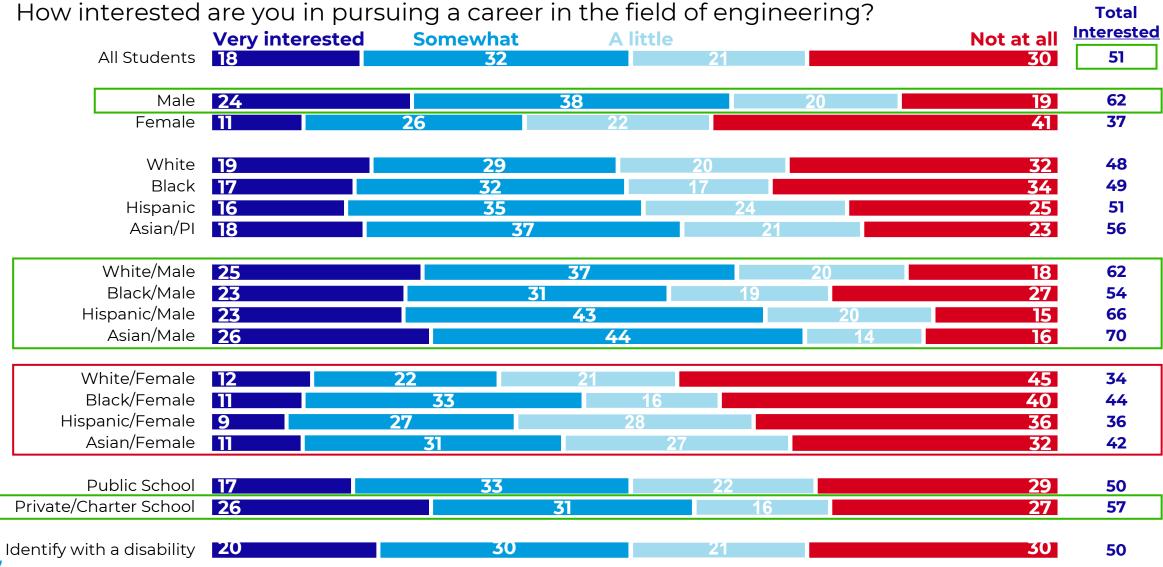

44 21 **Movers All Others** Base Engineering is always a very good Move to say engineering is a very good, good, or fair choice of a career choice of a career after messaging Male (51%) Female (23%) College grads (51%) Non-college grads (24%) Employed (48%) Black (30%) Parents of male children (49%) Parents of female children (24%) Child in private/charter school (55%) Child with a disability (28%) High-income (50% make more than Lower-income (29% make less than \$100K/year) \$50K/year)

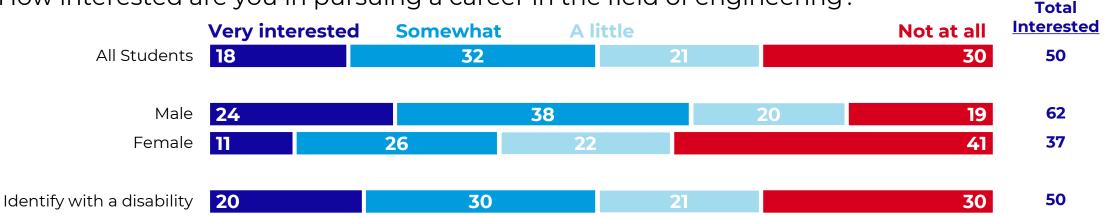

Perceptions of and Interest in Engineering

Student interest in engineering

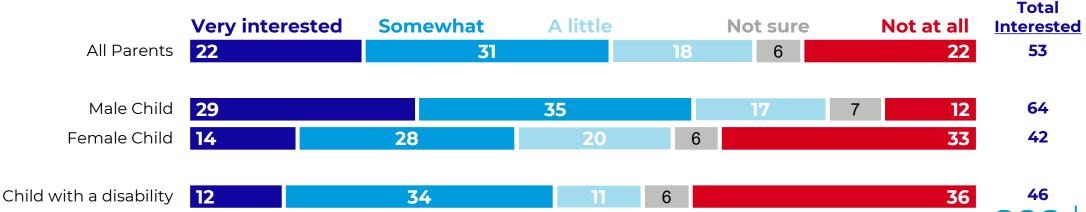

Students are interested in engineering, and parents appear to accurately assess their child's interest

How interested are you in pursuing a career in the field of engineering?

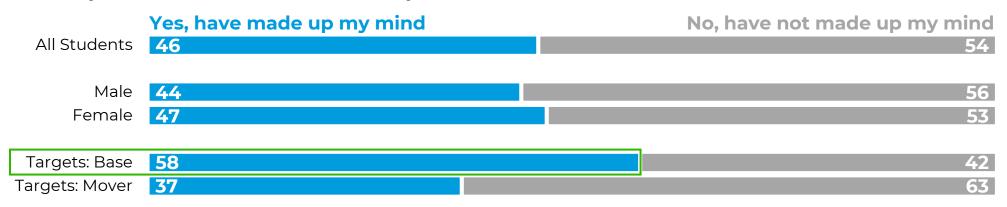

Thinking now about your child, how interested are they in pursuing a career in engineering?

Students have not made up their mind yet about their career, but those who have lean towards engineering and medicine

Not everyone has made up their mind about what they will choose as a career, have you chosen a field in which you would like to work for your career?

[IF YES] What field have you chosen to work in your career?

_		% coded responses	Male	Female
	Engineer	4%	6	2
Health	care/medical	4	2	5
Veterinarian/zoologist/work	with animals	3	1	4
Computer science/programming/softv	vare engineer	2	4	1
Psychology/Therap	ist/Counselor	2	<7	4

Architect	<]	<]	<]	1	-	-	2	-	<]	<]	1	-
Robotics	<7	<7	-	1	-	-	2	-	-	-	_	<7

Most students think building, construction, and math and science best describe the field of engineering

Below is a list of words or phrases...What words or phrases do you think describe engineers or the field of engineering?*

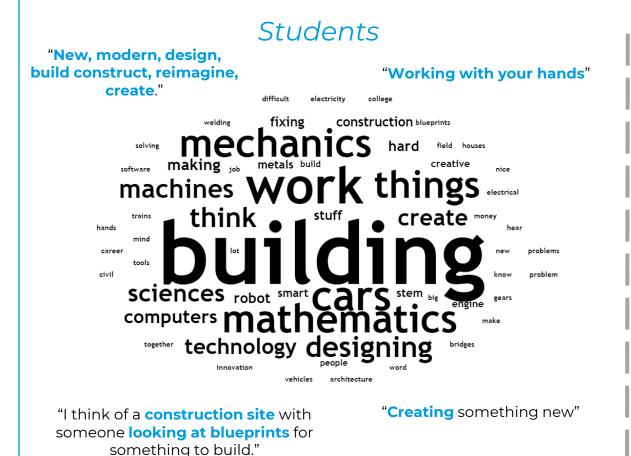

Parents

Similar to students, parents think of building and math when they hear "engineering"

What words come to mind when you see or hear the word ENGINEERING?

Parents "Very well-respected job. "Good pay, job security, Pavs very well. You're challenging, rewarding." doing meaningful work for yourself and the opportunities community." "Building and high paying technical SCIENCE designing things." prestigious study money creative "Hard, different school meaningful complicated, math." "When I hear the word engineering, I think of an excellent field for someone to be "Making a difference in society by in. It is hard and you have to be creating or building things." very smart, but it is rewarding in all aspects."

Students are interested in engineering for making and building things; those who aren't interested are wary of math

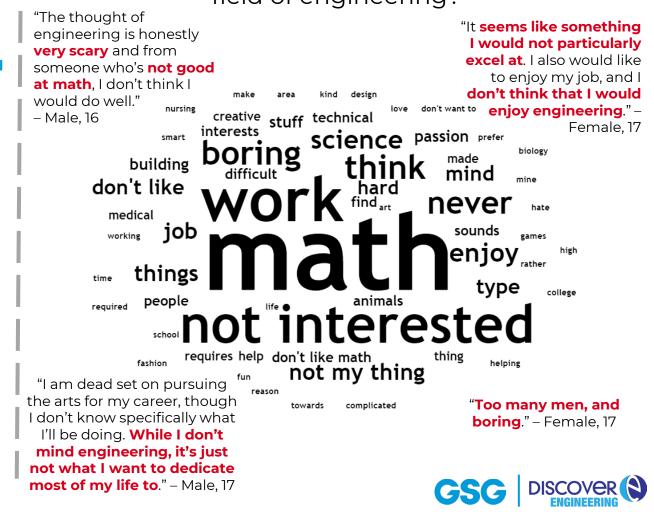

Why are you **very/somewhat/a little** interested in a career in the field of engineering?

"I am interested in creating "It seems like a very new technology that will aid good opportunity to the world in living more create new things and efficiently and making things make a decent that are affordable for amount of money." everyone." Male. 14 - Female, 15 computers opportunities

"Both my parents work in fields related to engineering, and I **enjoy** working with tools, planning things out, and building things.

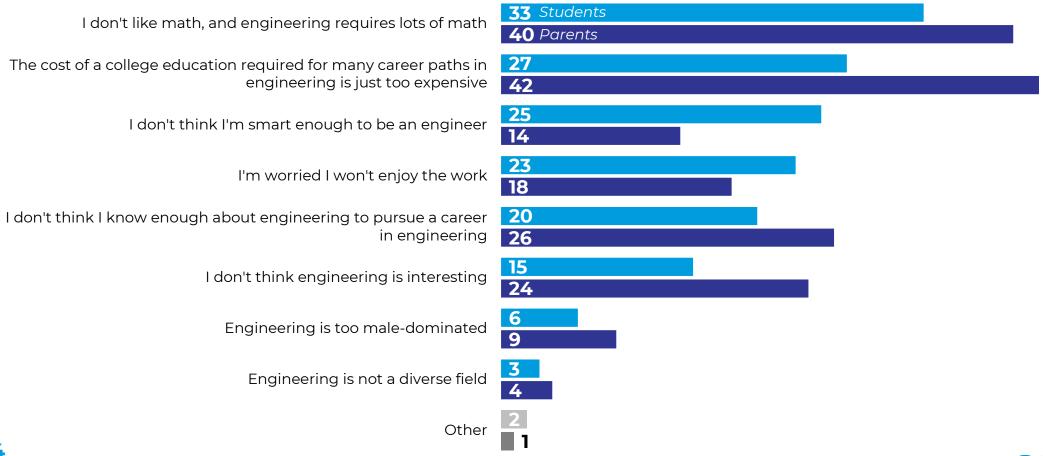

Furthermore, my current favorite subjects are math and science, two things that I'll put to use in the field of engineering." – Male, 15

Why are you **not at all** interested in a career in the field of engineering?

Students identify math as their #1 reason for not pursuing engineering, parents are more concerned by debt

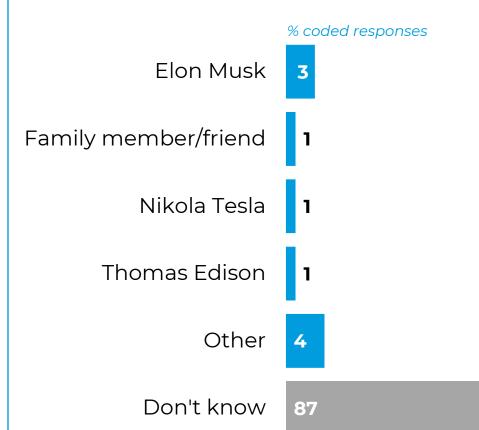

Below are some reasons students have identified for not pursuing a career in engineering...select the top two most convincing reasons to you [your child] to not pursue a career in engineering.

Few students can name a current or well-known engineer

Can you name any current, well-known engineers?*

Named by less than 1%

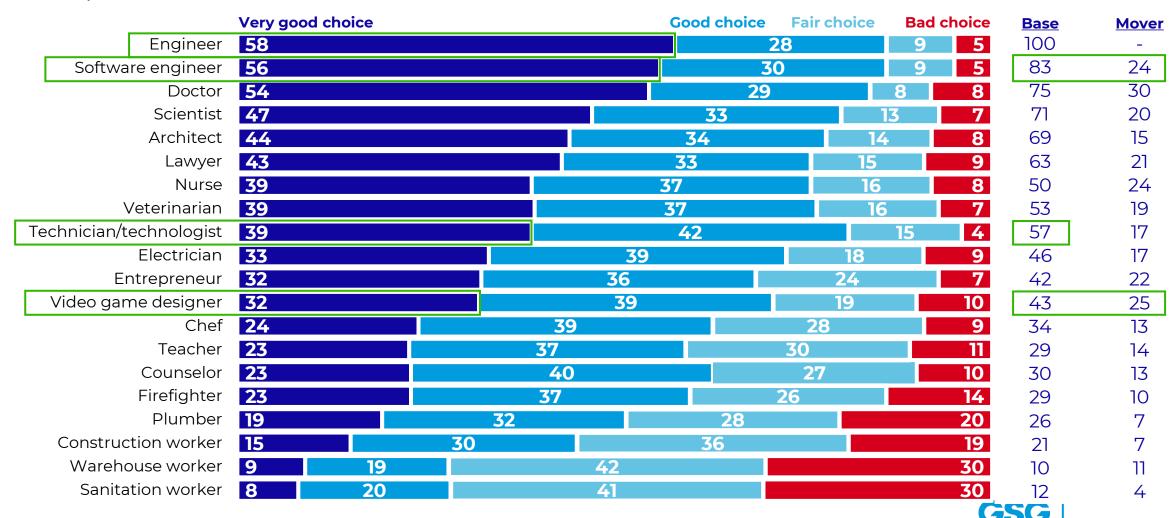

Mark Rober Bill Nye Jeff Bezos Albert Einstein Leonardo Da Vinci **Bill Gates** Henry Ford James Watt Alexander Graham Bell Wilbur and Orville Wright John Perkins Mark Zuckerberg Julius Berger Ada Lovelace Zaha Hadid Karen Bausman

*Data comes from student survey conducted in May

Parents have a positive impression of most lines of work, but Engineering rises to the top

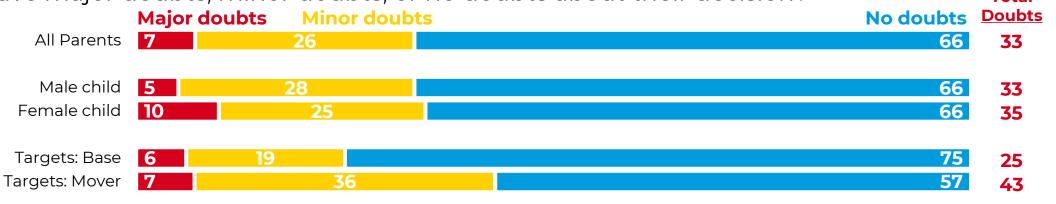

Choice of professions or careers...

Parents would feel comfortable with their child pursuing a career in engineering with a Bachelor's degree

Some careers in engineering call for a **Bachelor's degree** from a four-year college. If your child were to enter a four-year college program with the intention of becoming and engineer, would you have major doubts, minor doubts, or no doubts about their decision?

Total

Some careers in engineering call for an Associate's degree from a two-year college program...

All Parents	Major doubts	Minor doubts 35	No doubts 55	46
Male child Female child		36 33	56 53	43 47
Targets: Base Targets: Mover		28 38	53	37 47

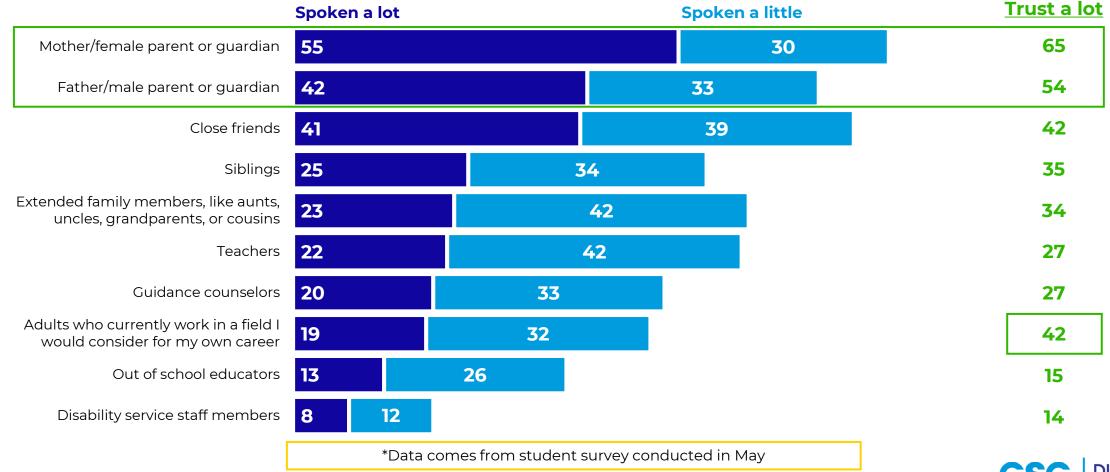

Career Influencers and Priorities

Students have mostly spoken to and trust their parents/guardians about their future career

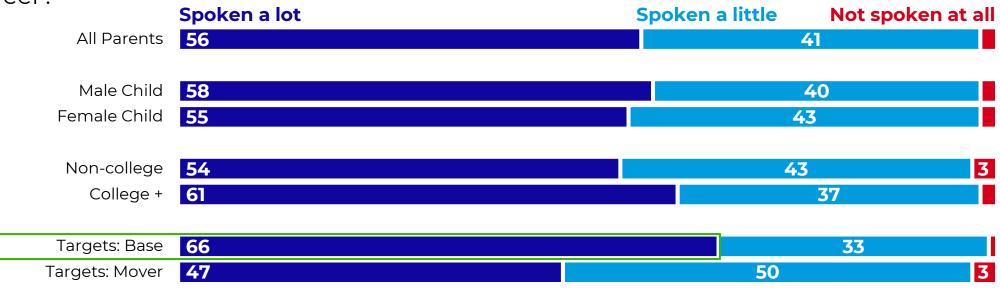

How much have you spoken to each of the following people about careers or what you might do in the future for a career?

Parents have spoken to their children a lot about their future career

Have you spoken with your child about careers or what you they might do in the future for a career?

How much have you spoken to each of the following people about careers or what you might do in the future for a career?*

Trust a lot

*Student data comes from student survey conducted in May

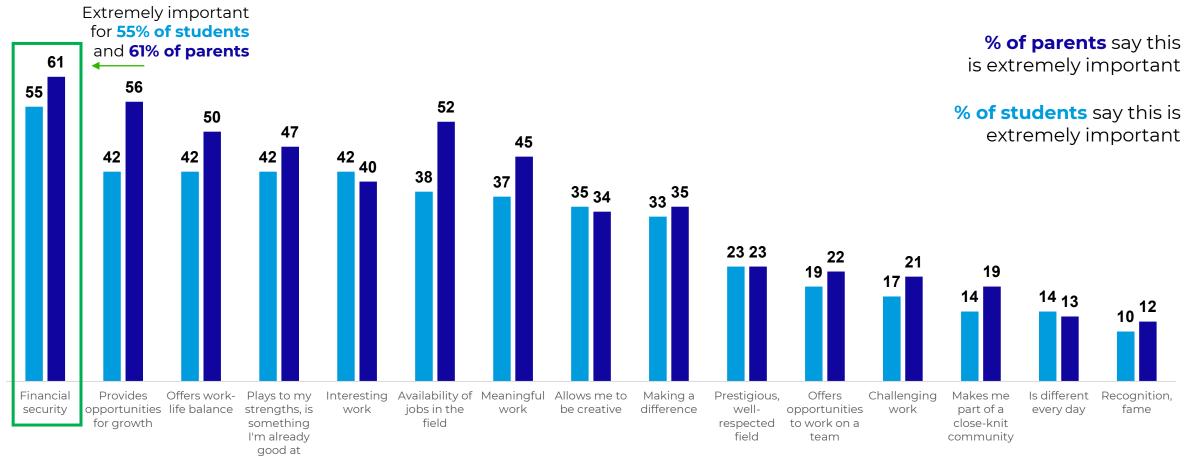

After the economic volatility of the COVID-19 pandemic, financial security is paramount in career priorities both among parents and among students.

Parents value most career priorities slightly more than students; both prize financial security the most

Please indicate how important each of the following [is to you in considering which career to get into/should be to someone starting a career.] % Extremely Important

Parents and students firmly align on values like financial security and personally rewarding work

When forced to make a choice, parents and students align on values...

Going to college > Starting a career right away

And they prioritize...

Financial security

Personally rewarding

Doing meaningful work

Parents and students differ on prioritizing...

Students prioritize...

Parents prioritize...

High paying job > Not taking on lots of debt

High paying job = Not taking on lots of debt

community

Making a difference in your _ Making a difference in the world

Making a difference in your community

Making a difference in the world

Students are driven to solve problems and are unfazed by the challenges facing their generation

When forced to make a choice students prioritize...

Every generation has had its own challenges it has to address, and ours is no different

There's too much pressure on young Americans to solve future problems

Solve problems

> Create new things

Working outside of a traditional office

> Working in a traditional office

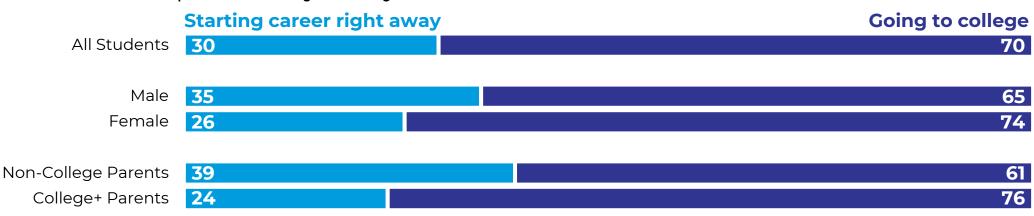

Working independently

Working in a team

Both students and parents prioritize going to college over starting a career right away

Which is more important to you in your future career...?

Which do you think should be more important to someone starting a career...?

Most parents hope their child goes to a 4-year college

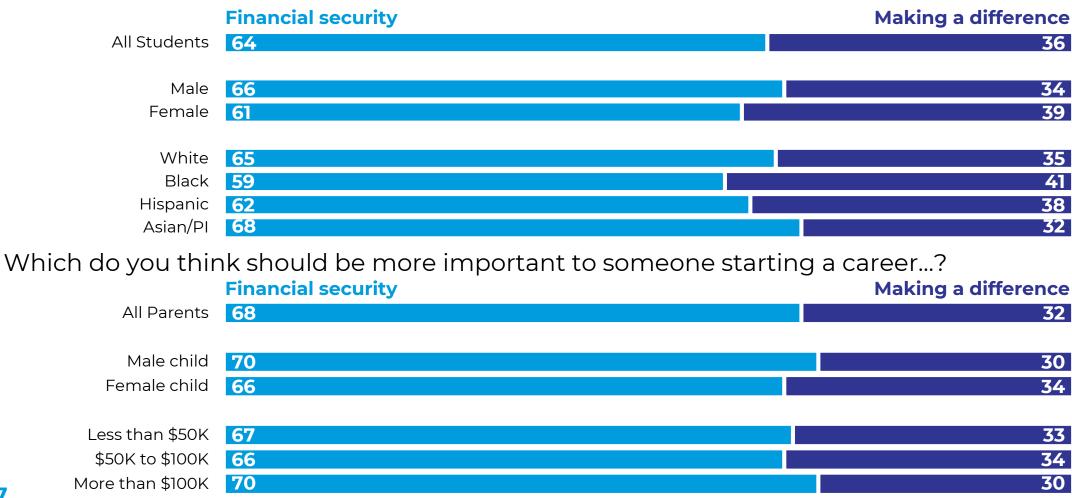

When your child graduates high school, what do you hope they will be doing next? (Multiple responses allowed)

respons			Male Child	Female Child		College +	Base	Mover
	Attending a 4-year college	67% of parents	68	66	59	85	78	56
Taking (classes at a community college	36	35	36	41	24	37	30
Wor	king at a full or part-time job or internship	31	33	29	34	24	29	38
Attending a	trade school or apprenticeship	23	28	19	26	18	25	22
	Enlisting in the military	7	9	5	8	5	8	10
	Joining a service organization	4	6	3	3	7	7	2
	Something else	1	1	1	1	-	1	1
	Haven't decided/not sure	4	3	4	4	2	2	5

After several years of economic volatility, financial security is a priority over making a difference

Which is more important to you in your future career...?

Both parents and students prioritize financial security over meaningful work

Which is more important to you in your future career...?

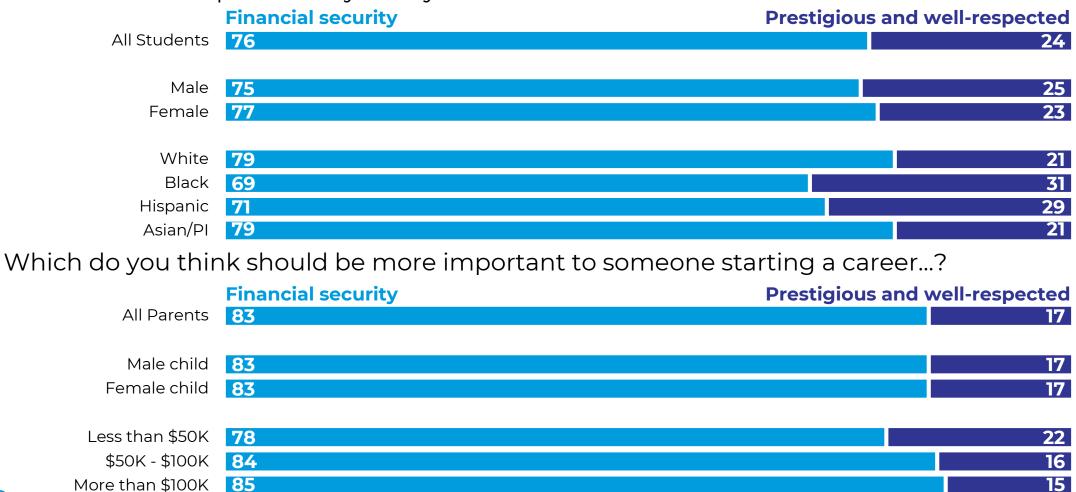

Which do you think should be more important to someone starting a career...?

	Financial security	Meaningful work
All Parents	67	33
Male child	70	30
	-	
Female child	63	37
Less than \$50K	71	29
\$50K to \$100K	65	35
More than \$100K	66	34

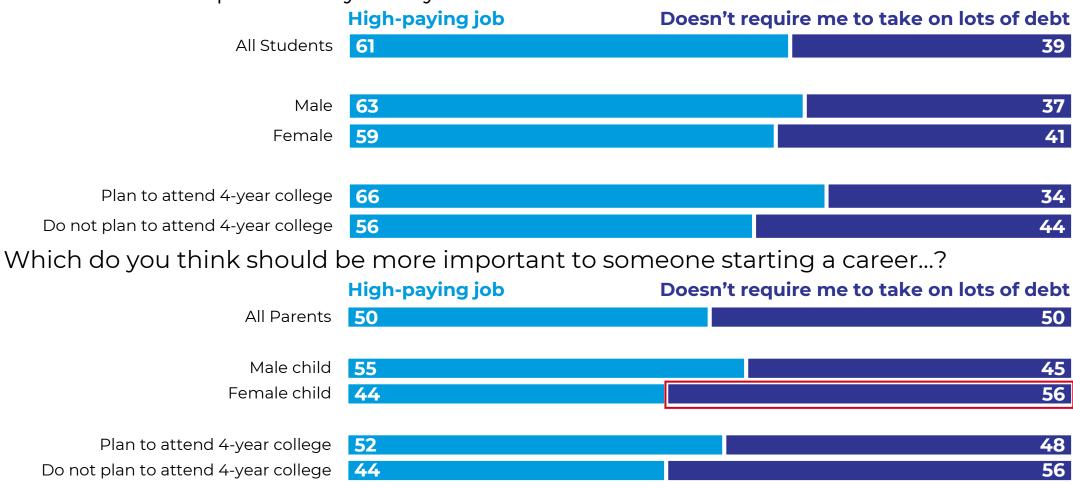

Financial security is more important to students and parents than prestigious and well-respected careers

Which is more important to you in your future career...?

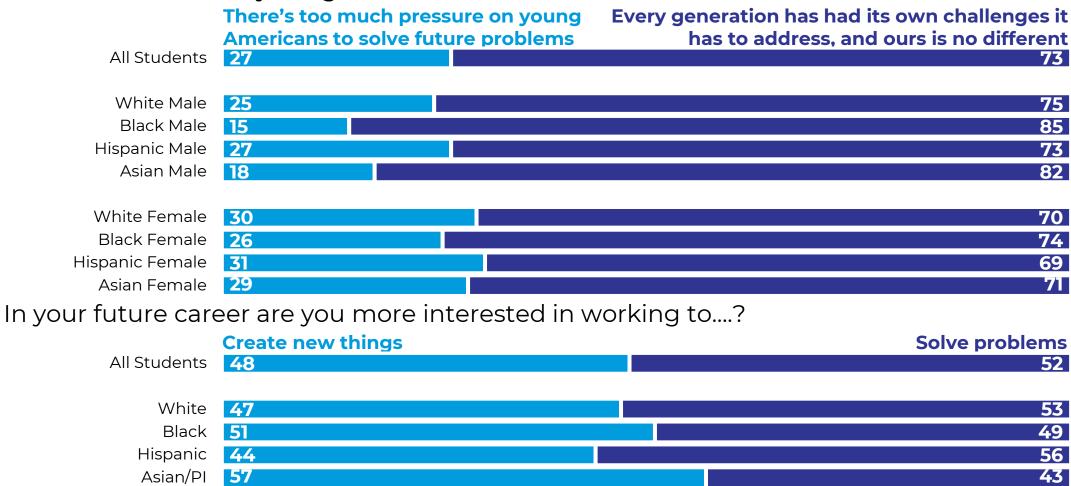

Students are more likely to value long-term earnings, while parents are slightly more concerned with debt load

Which is more important to you in your future career...?

Students are undaunted by the challenges facing their generation and open to both solving problems and creating

Which statement do you agree with more...?

Students are split on making a difference in the world or their community, while their parents prioritize community

Which is more important to you in your future career...?

Students value personally rewarding work over prestige, parents even more so

Which is more important to you in your future career...?

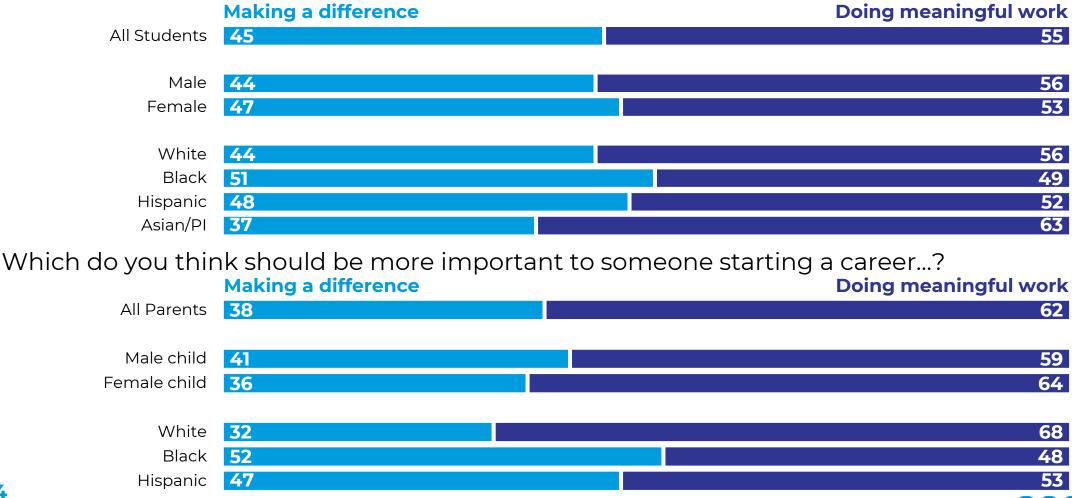

Which do you think should be more important to someone starting a career...?

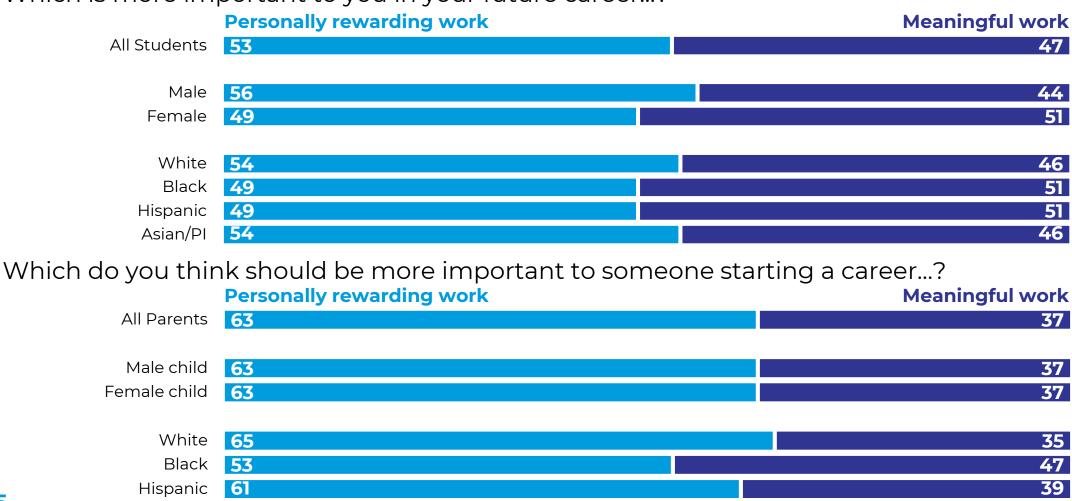

Parents are slightly more likely to prioritize meaningful work than students

Which is more important to you in your future career...?

Personally rewarding work is clearly preferred by parents over meaningful work, less strongly preferred among students

Which is more important to you in your future career...?

Students are split on working individually vs. working in a team, but prioritize working outside of a traditional office

Which is more important to you in your future career...? **Working independently** Working in a team 49 All Students 51 Decided on future plans 51 49 Not decided on future plans 63 **37** Targets: Base 38 62 51 49 Targets: Mover Which is more important to you in your future career...? Working in a traditional office Working outside of a traditional office 23 All Students 77 Decided on future plans 23 77 Not decided on future plans 81 19 Targets: Base 31 69 **78** Targets: Mover 22

Students want to pursue a career that allows them to ensure access to clean water and program video games

How interested are you in pursuing a career...? **Total Interested** Very All interested Somewhat Not that Not at all **Students** Male Female Base Mover ...that works to ensure that all individuals have access to clean water ...where you design and program video games ...where you can design and build life-saving medical devices ...that directly addresses or tries to reverse climate change ...that contributes to space exploration ...that directly contributes to building better, safer, self-driving cars ...where you can work in the design and production of lines of shoes

Attitudinal Movement

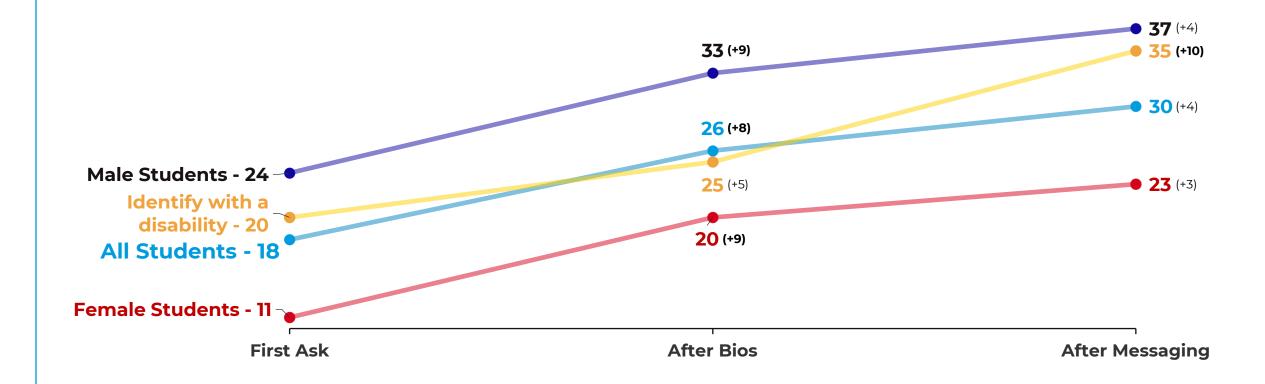

Students are more interested in engineering after reading biographies of engineers.

Messaging is most effective at reducing perceptions that a college education is not necessary to pursue some career paths in engineering.

Student interest in engineering grows with exposure to biographies of engineers

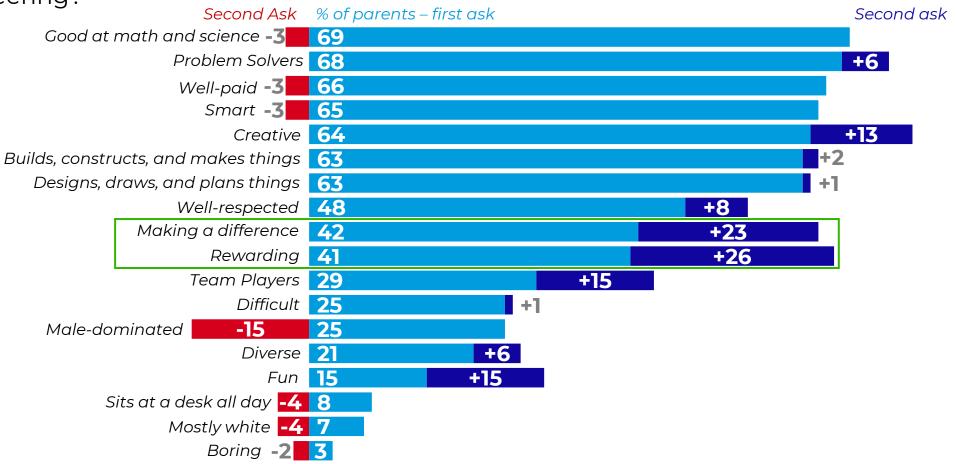

How interested are you in pursuing a career in the field of engineering? %Very Interested

Messaging increases positive impressions for parents, that engineering is rewarding and can make a difference

Below is a list of words or phrases...What words or phrases do you think describe engineers or the field of engineering?

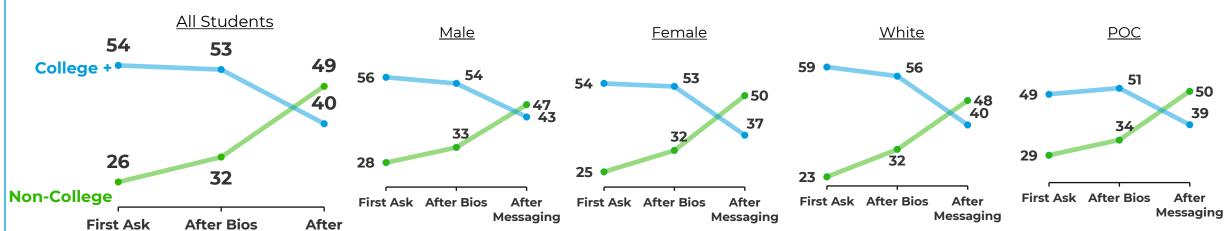

Parents and Students believe a Bachelor's degree is necessary for a career in engineering, messaging reduces this perception

Based on what you have heard, what is the minimum level of education necessary to become an engineer? All Parents

	<u>All Parents</u>	Male child	<u>Female child</u>	Non-college	<u>College+</u>	Child with a <u>disability</u>	<u>Base</u>	<u>Target</u>

Not sure	10	7	12	13	2	15	7	11

Based on what you have heard, what is the minimum level of education necessary for a career in the engineering field? *All Students*

Messaging

Messaging

Full Text of Tested Messages

EVERYONE

Engineering is a career that is open to everyone. You don't need to graduate from a four-year university to have a successful career in engineering.

PAY

Engineering is a well-paid and prestigious field that sets students up for success. Engineering is in high demand with companies these days because they value people who can build new things. Even though it's becoming harder to afford the cost of living in America, studying engineering gives you financial freedom.

WORLD OF DIFFERENCE

Engineers make a world of difference. From everyday things like elevators, TV, and electric lights – to newer innovations like self-driving cars and spaceships – they have helped build the world around us, and get us to new ones in the future.

CREATIVE - PROBLEM SOLVER

Engineers are creative problem-solvers, building better, safer, self-driving cars, and designing smarter road systems to reduce traffic accidents and congestion.

SHAPE THE FUTURE

Engineers help shape the future. They develop the latest tools and technology to expand space exploration and look beyond our solar system.

COMMUNITY

There are countless challenges facing the world, but change can start at home. Engineers create things that improve the lives of those in their communities. Countless investors started developing something new and useful without fancy equipment, which went on to help the world later.

STICK WITH IT

Engineering may seem intimidating, but it was hard for everyone at first. Engineering is just like anything else – you get the hang of it with time and practice. In fact, most engineers say they are glad they stuck with it. Once they got out of school, they found it more rewarding than they could have anticipated.

Full Text of Messages Tested

REAL WORLD

Engineers connect science to helping people in the real world. Two billion people struggle with access to clean water, which has inspired scientists and engineers to start developing ways to filter the salt from seawater to solve this global crisis.

CREATIVE

Engineers are creative, from creating chemical fragrances for beauty products to designing smarter road systems to reduce traffic accidents and congestion.

HEALTH, HAPPINESS, SAFETY

Engineering is essential to our health, happiness, and safety. From growing organs for transplants to ensuring that communities have access to clean water, it is impossible to imagine life without engineering.

TEAM PLAYERS

Engineers are team players who collaborate with people from all walks of life. Because the things they create are so ambitious, they have to connect with others to gain inspiration and knowledge, and then work together to make it into reality. These teams often have members from across the world, all working toward a common goal.

CAREER PATHS

Engineering is just the beginning of a professional journey with many paths. The skills you learn along the way open up all sorts of doors down the road. You don't have to become a chemist or build airplanes – you can lead a nonprofit or advise governments too. The possibilities are endless.

FUTURE

The world of tomorrow is counting on you to build a better future. Engineers can play a big role in solving longstanding problems by creating new things that make the world safer and more equitable. But without new engineers, we're at risk of losing generations of progress and innovation.

CLIMATE

Even though young Americans did not contribute to the problems of climate change or diminishing resources, we need the engineers of tomorrow to find solutions to them. We need to develop new technologies that reduce carbon in the atmosphere and increase cleaner alternatives, or things will get even worse very soon.

"World of Difference" is both appealing and believable among our Base Targets, "Shape the Future" among Movers

Bios of video game developers are rated as the top two most appealing bios

You will now read several short bios of engineers... bios ranked by 'very appealing' overall

Why did the bio of [ENGINEER] make you more interested in the field of engineering?

#1 Jade Raymond Jade Raymond is a **video game designer and computer engineer** known for her work on The Sims Online and for leading the team that developed Assassin's Creed. She is the CEO of Stadia Games and Entertainment, and the founder of Ubisoft Toronto, and Motive Studios.

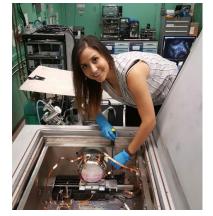

Ahmed and Khalil Abdullah Ahmed and Khalil Abdullah are brothers and video game designers who founded multi-aware winning game company Decoy Games after both studying computer science at UMass Amherst. Using their combined computer science knowledge, and online tutorials about video game development, they created their first video game Swimsanity!

Bios of NASA engineers are appealing, and their at-work images make students feel most interested in engineering

You will now read several short bios of engineers... bios ranked by 'very appealing' overall

#3 Dr. Margaret Dominguez

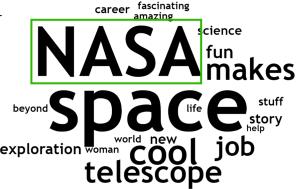

Dr. Margaret Dominguez is an optical engineer at the NASA Goddard Space Flight Center. At NASA her work has contributed to the new James Webb Space Telescope, the largest optical telescope in space. She is also working on the Roman Space Telescope in development at NASA, designed to document planets outside of our solar system, and offer insights into how dark energy shapes our universe.

4 Dana Bolles

Dana Bolles dreamed of becoming an astronaut where she could work in an environment without her wheelchair. She pursued a career in mechanical engineering and earned a master's degree in Rehabilitation Engineering and Technology. She works at NASA, and over the course of her career, has built an internal website on the Exploration of Life beyond Earth and led a team of astrobiologists to develop a tool to help NASA better prepare the public for an eventual announcement of finding life.

Why did the bio of [ENGINEER] make you more interested in the field of engineering?

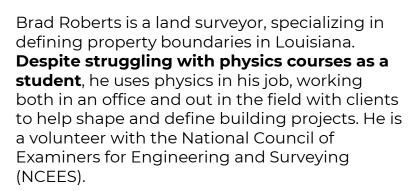

While less appealing overall, Wesley and Brad's bios appeal to some students for their struggles with math and physics

You will now read several short bios of engineers...

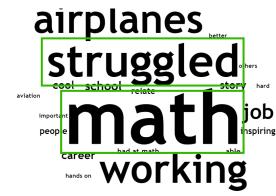

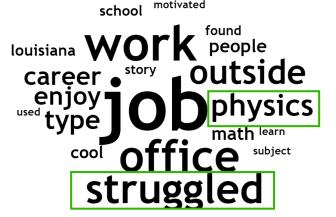

Wesley Hipolito

Wesley Hipolito **struggled with math in high school**, but after taking a machining class at Asnuntuk Community College, studied machining technology and began working at Flanagan Industries where he is an integral member of a team making components of airplanes.

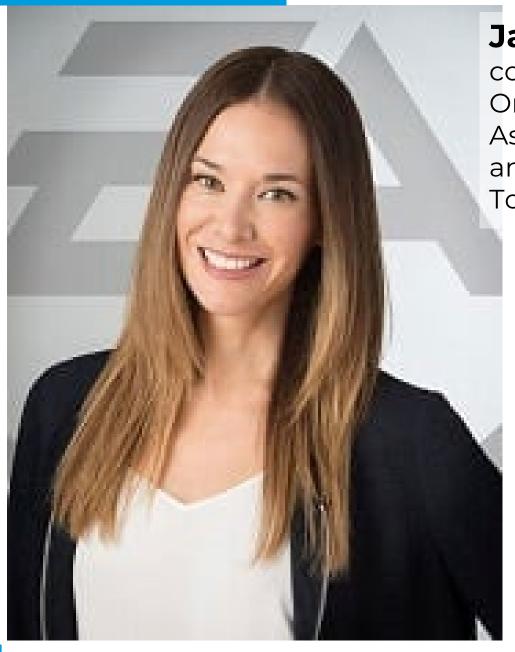

Why did the bio of [ENGINEER] make you more interested in the field of engineering?

Brad Roberts

Jade Raymond is a video game designer and computer engineer known for her work on The Sims Online and for leading the team that developed Assassin's Creed. She is the CEO of Stadia Games and Entertainment, and the founder of Ubisoft Toronto, and Motive Studios.

"Her job includes video games which I love, and she's created a couple games that I love. She's also a woman so I thought that was cool and her experience was good too." – Female, Asian, age 15 "Her job would be so much fun, designing video games though I know it's hard would allow you to be **creative** and have fun with it." – Female, White, age 16

"Because I am physically handicapped, the idea of designing video games is appealing because it wouldn't be such a physical job."

– Male, White, age 14, identify with a disability

Most interesting to:

- Mover target group
- Students who identify with a disability

Ahmed and Khalil Abdullah are brothers and video game designers who founded multi-aware winning game company Decoy Games after

both studying computer science at UMass Amherst. Using their combined

computer science knowledge, and online tutorials about video game development, they created their first video game *Swimsanity!*.

"Because I have a brother and we are really close and we love playing video games and we wish we could create our own someday."

- Male, Black, age 15

"I enjoy video gaming and didn't **realize that engineering was behind it**." – Male, Hispanic, age 17

my community and I love the gaming part as I love gaming with my friends."

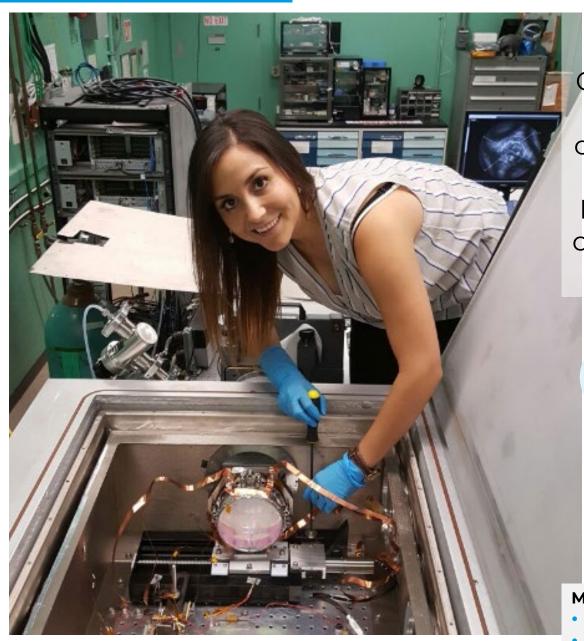

"They look like me and people in

- Male, Black, age 15, identify with a disability

Most interesting to:

- Male students
- Black and Hispanic male students
- Students who identify with a disability

Dr. Margaret Dominguez is an optical engineer at the NASA Goddard Space Flight Center. At NASA her work has contributed to the new James Webb Space Telescope, the largest optical telescope in space. She is also working on the Roman Space Telescope in development at NASA, designed to document planets outside of our solar system, and offer insights into how dark energy shapes our universe.

"How cool would it be to work on something so awesome. Space is so interesting and fascinating." – Female, White, age 15

"I would love to work for NASA.

When it comes to work that makes a difference it doesn't get much better than NASA."

– Male, White, age 15

"I think her work is the most interesting. Especially her work on the James Webb Telescope. I love space and I'm pumped about the pictures we're seeing with our new technology. I'd love to work on stuff like that."

- Female, White, age 15

- Base target students
- White female students

"Her story is so amazing, she didn't let anything stop her from finding a job she loves and is amazing at."

- Female, Hispanic, age 18

"She is **very inspiring**. She has a disability and still was able to fulfill her dreams and work at the most amazing job on the planet, at NASA.

That's more than awesome! She has definitely inspired me to look into engineering for a possible career."

- Male, Black, age 15

Dana Bolles dreamed of becoming an astronaut

where she could work in an environment without her wheelchair. She pursued a career in mechanical engineering and earned a master's degree in Rehabilitation Engineering and Technology. She works at NASA, and over the course of her career, has built an internal website on the Exploration of Life beyond Earth and led a team of astrobiologists to develop a tool to help NASA better prepare the public for an eventual announcement of finding life.

Most interesting to:

Mover target students

Female students

"I like the thought of **finding** life on other planets and our solar system." - Male, White, age 17

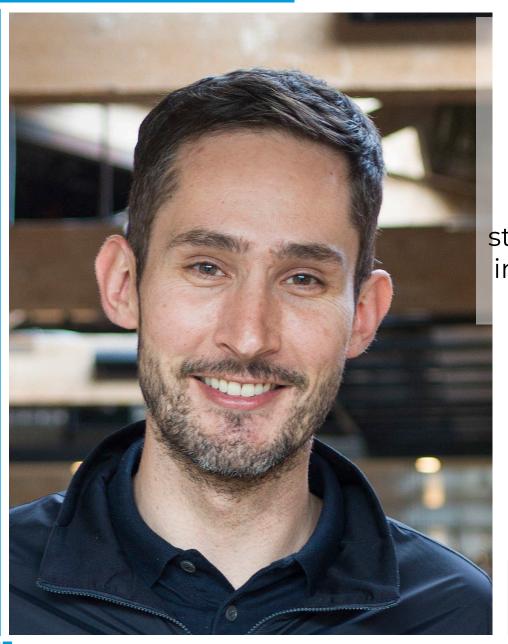

> "I like the idea of being an on eventually contacting life other than ourselves."

- Female, White, age 17

perhaps colonizing planets in

engineer at NASA and working

Dana Bolles is a mechanical engineer with a master's degree in Rehabilitation Engineering and Technology and works at NASA. Over the course of her career, she has built an internal website on the Exploration of Life beyond Earth and led a team of astrobiologists to develop a tool to help NASA better prepare the public for an eventual announcement of finding life.

Kevin Systrom is an American computer programmer and the co-founder and former CEO of Instagram. A graduate of Stanford University with a bachelor's degree in management science and engineering, Systrom developed an interest in photography, spending a semester in Florence, Italy studying photography and later co-founding Instagram in 2010. He was included in the list of America's Richest Entrepreneurs Under 40 in 2016.

"He is the founder of Instagram! I never thought he just had the idea after some photography classes. That sounds like a very creative job and very successful."

– Male, Black, age 15

Most interesting to:

 Students who use Instagram every day "I think because Instagram is so successful and well known it caught my attention more. It **showed me a different side of engineering** too." – Male, Hispanic, age 14

Tamer Shaheen is a YouTuber and TikTok influencer and a mechanical engineering who shares his insights into the field of mechanical engineering, how to be a successful student, and how to get a job as a mechanical engineer. He has worked for Tesla and Serve Robotics as a mechanical design engineer.

"I am always on social media sites and it's exciting to see someone with a strong presence who is also an engineer." – Male, Hispanic, age 15 "Because he does things I can relate to (TikTok/YouTube) so I feel more confident and open to exploring this field." – Female, White, age 16

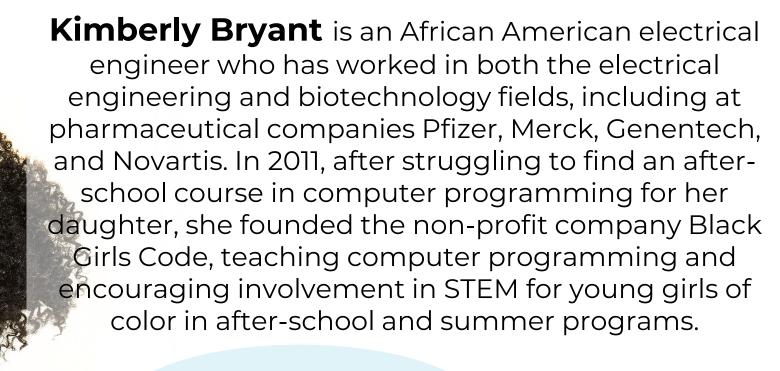

Most interesting to:

- Male students
- Base target group
- Male/Mover target group

"I like that he teaches people how to get into the field of mechanical engineering on TikTok because it is easily accessible and he is also young, so that could make others curious to watch his videos."

– Male, Black, age 16

"I liked the story of **someone who looks like me**, makes me
feel I can do the same thing."

– Female, Black, age 14

Most interesting to:

- Black students
- Female Black students

"It truly just is encouraging to see a fellow woman of color in the STEM field. **Seeing this pushes me to continue in the field as well**." – Female, Black, age 17

Allie Reiling is a water engineer, working for Caminos de Agua, a non-profit organization that works with local communities in Mexico to monitor local water quality and apply current technologies and invent new technologies to address water quality and

scarcity problems.

"I thought her career was meaningful and had a purpose of making a difference by working towards solving the water scarcity issue." - Female, Hispanic, age 15

"I love how the work she does is directly helping communities and families have access to safe and clean water." - Female, Asian, age 18

"She is doing amazing work for a country that needs it. My family is Mexican and I would have loved to make a differencee in their country if I had an engineering background."

- Female, Hispanic, age 18

- **Female Hispanic students**
- Female/Mover students

Wesley Hipolito struggled with math in high school, but after taking a machining class at Asnuntuk Community College, studied machining technology and began working at Flanagan Industries where he is an integral member of a team making components of airplanes.

"He is capable of working in the field of engineering even though he originally wasn't doing the best in math. In high school I struggled in calculus, so seeing this guy becoming an engineer and push through his struggles in math is inspiring."

- Female, Asian, age 18

"Because he was able to get a career regardless of struggling in math, which is what I struggle in.

He designs aircraft, which carries lots of people every day."

– Male, Hispanic, age 15

- Male Black students
- Male Hispanic students
- Base target group

Dr. Chanda Prescod-Weinstein is both an Assistant Professor of Physics and Core Faculty Member in Women's and Gender Studies at the University of New Hampshire. She is also a monthly columnist at New Scientist, and author of The Disordered Cosmos: A Journey into Dark Matter, Spacetime, and Dreams Deferred, a popular science book on particle physics and cosmology.

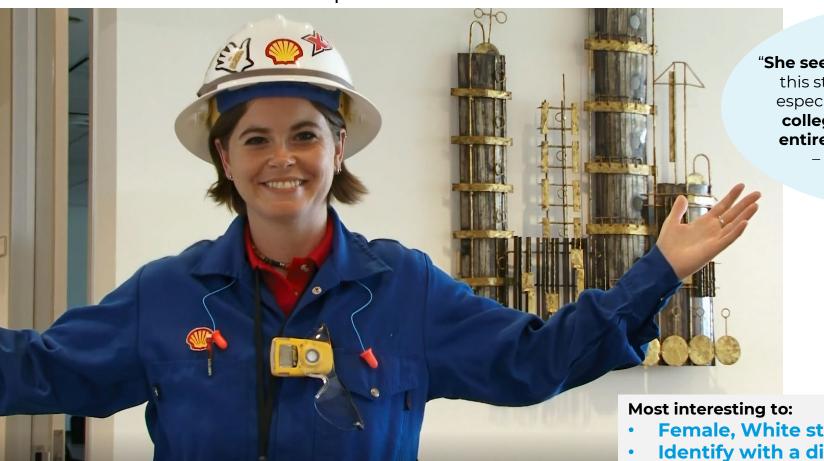

"Engineering is a field that had always been shown to me as some kind of 'traditional' and 'boys only' **field** so to see someone in the field that is not only a woman but a political activist is inspiring to me." - Female, White, age 18

> "It's the exact field I want to be in. I was and still am very curious about the solar system and how it works." - Female, Black, age 15

- **Female Black students**
- Female/Mover target group

After getting laid off, Christina Smith changed careers, graduating from the College of the Mainland in the Process Technology program, all while raising her young daughter. After interning for Shell, she was hired as an full-time employee out of her internship.

"She seems to actually enjoy it, and this story was more interesting, especially concerning changing college classes to pursue and entirely different career path."

- Female, White, age 17

"Knowing that she had a different job and changed to the field of engineering made me wonder if I might enjoy it if I gave it a chance."

- Female, Hispanic, age 18, identify with a disability

Female, White students

- Identify with a disability
- **Base target group**

Brad Roberts is a land surveyor, specializing in defining property boundaries in Louisiana.

Despite struggling with physics courses as a student, he uses physics in his job, working both in an office and out in the field with clients to help shape and define building projects. He is a volunteer with the National Council of Examiners for Engineering and Surveying (NCEES).

"The bio sounded like it was **more than sitting at a desk doing math**."

– Male, White, age 16

"Being from Louisiana I find it very interesting when it was mentioned and it makes me think if he could do this then so could I."

– Male, Black, age 17

Most interesting to:

- Male, Black students
- Base target group

"I chose not to take Physics as a class in my senior year because I suck at it. Part of why I don't want to do much with the sciences is that I'm not very good at physics at all. His being able to do cool stuff in engineering despite not being good at physics in high school makes me feel more reassured."

- Female, Hispanic, age 17

Student-to-student and parent-to-parent conversations about engineering focus on a global impact

If you were to try to convince **your child** to pursue a career in engineering, what would you tell them?

science look field life opportunities opportunities well good financial make high chance great security of take of the possibilities well good future great security different work take of math build build

If you were trying to convince **another parent** why engineering is a good career for their child to consider, if a few words, what would you tell them?

If you were trying to convince your peers to pursue a career in engineering in one sentence, what would you tell them about engineering?

Things to Consider When Developing Targeted Messages

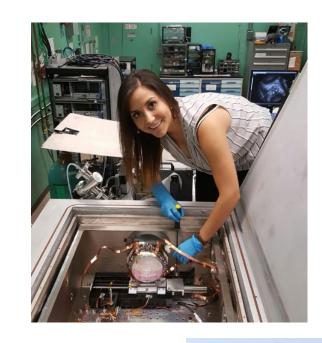

Targeted Communication to Girls

• Elevate biographies of female engineers. Using profiles and messages together is more effective than traditional messaging alone, which is harder to relate to or believe. When girls see profiles of women in engineering, they can visualize themselves in those careers and say...

"I liked the story of someone who looks like me, makes me feel I can do the same thing."

"Engineering is a field that has always been shown to me as some kind of 'traditional' and 'boys only' field so to see someone in the field that is not only a woman, but a political activist is inspiring to me."

• Emphasize "meaningful" work over "personally rewarding" work, though this is a narrow preference..

Targeted Communication to Boys

• Educate about opportunities to work in engineering without going to college. Boys appear to be especially responsive once informed of these alternative entry points into the field. Profiles that show individuals in careers in engineering who have taken a less traditional route break through preconceived notions of engineering:

"He was able to get a career regardless of struggling in math, which is what I struggle in."

- Emphasize "personally rewarding" work over "meaningful" work, though this is a narrow preference.
- Elevate video game development as a career option, as this appears to be particularly compelling for boys:

"I enjoy video gaming and didn't realize that engineering was behind it."

Targeted Communication to Black Boys and Girls

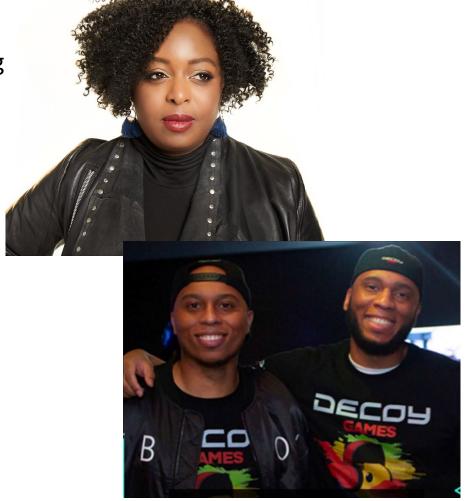

• Emphasize opportunities for meaningful work, financial security, and making a difference in the world (over making a difference in one's community).

• Introduce profiles of Black engineers, and where possible match the gender of the engineer to the target audience.

Black girls, in particular, are more likely to become interested in engineering as a result:

"It truly just is encouraging to see a fellow woman of color in the STEM field. Seeing this pushes me to continue in the field as well."

"They look like me and people in my community."

Targeted Communication to Hispanic Boys and Girls

• Among boys, note opportunities to make a difference in the world over their community, and reemphasize through messaging that it is a field with competitive compensation:

"[She is doing] life changing work, not just for an individual but the world as a whole."

 Among girls, introduce bios of female engineers and note that it is a "creative" field:

"I thought her career was meaningful and had a purpose of making a difference."

Targeted Communication to Students Who Identify with a Disability

- Use messaging to strengthen profiles to boost interest in engineering. Highlight the themes around "pay" and "health, happiness, safety".
- In targeted communications to students with a disability, note that the message "engineering is for everyone" is both the most appealing message and also the least believable.
- Use this "for everyone" language only if you are able to back it up with believable evidence that it is true for this target group.

Health, happiness, safety

Engineering is essential to our health, happiness, and safety. From growing organs for transplants to ensuring that communities have access to clean water, it is impossible to imagine life without engineering.

Pay

Engineering is a well-paid and prestigious field that sets students up for success.

Engineering is in high demand with companies these days because they value people who can build new things. Even though it's becoming harder to afford the cost of living in America, studying engineering gives you financial freedom.

Targeted Communication to Asian Boys and Girls

- Boys are particularly receptive to profiles of software engineers, video game developers, and computer programmers. The "world of difference" and "pay" messages appealed to this group.
- Among girls, highlight profiles of female engineers to boost interest in engineering. Profiles of female engineers working in varying engineering roles appealed the most to this group, and the "multiple career paths" and "engineering is for everyone" messages resonated best with girls.

Targeted Communication to Native American Boys and Girls

• Among Native American students, we have a smaller sample size, but these students are similarly interested in profiles that allow them to imagine themselves as engineers doing interesting things.

In their own words:

"If Dana Bolles can do it pretty much anyone could! She gives me a lot of hope and is inspirational!"

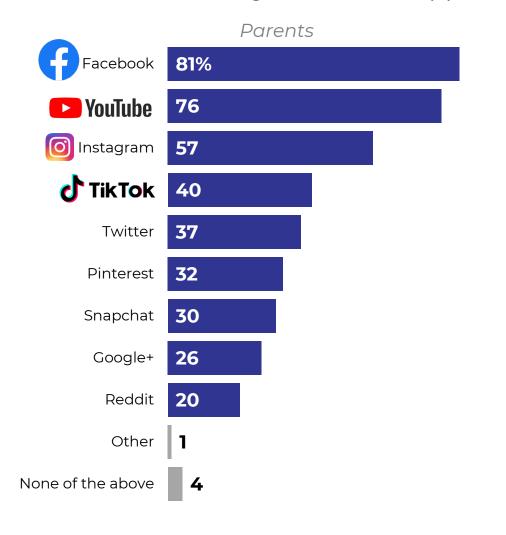

"Jade Raymond works on games I really enjoyed as a kid and is probably making more.

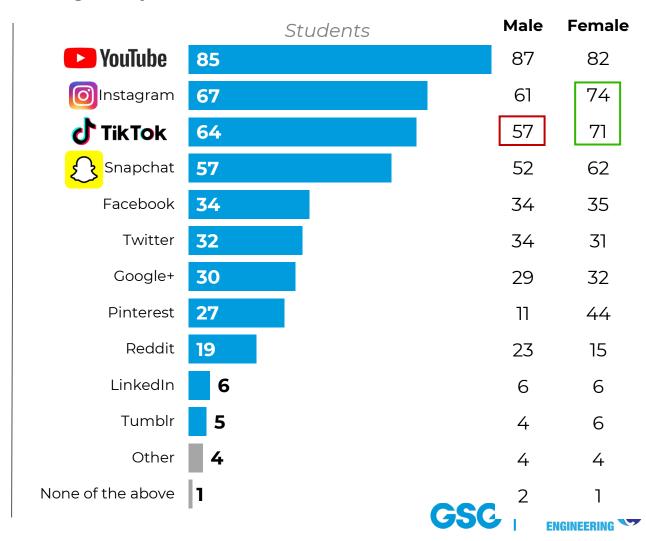

Communication with students and parents should be tailored to their differing social media preferences
